Matched trajectory pair: rotating field retained, standing field escaped

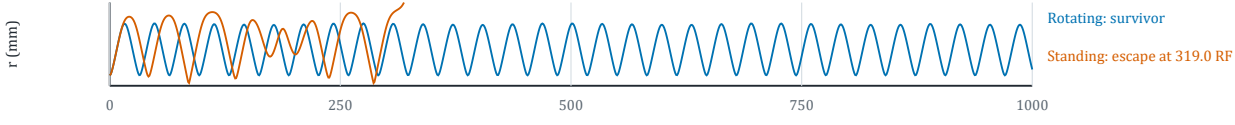

$E_\perp = 1.0$ eV · $r_0 = 1.0$ mm · $\varphi_{RF} = 180°$ · $\theta_0 = 45°$ · sign $v\theta = +1$

A Rotating: 250 V

B Standing: 353.553 V

Time in RF periods; rotating trace is right-censored at 1000 RF. Standing trace ends at first outward crossing.
