Late escape depends on a specific combination of measured harmonics

Two V6 transition-side launch states · h35/h50 full N48 and one-at-a-time h35 harmonic deletions

Stroboscopic r at integer RF phase; triangles mark exact first escape. h50 preserves class but shifts late escape by 33–78 RF periods.

C One-at-a-time deletion: exact finite-time outcomes

Applied modes	−vθ launch	+vθ launch
full N48	892.6	722.6
full − m=8	≥1000	≥1000
full − m=16	698.7	≥1000
full − m=20	≥1000	≥1000
full − m=28	≥1000	813.6
full − m=32	890.6	≥1000
full − m=40	892.5	722.6
full − m=44	892.6	722.6
m=4+8+20	828.6	≥1000
m=4+8+16+20	≥1000	815.4

escaped; number = first passage (RF periods)

retained; right-censored at 1000 RF
