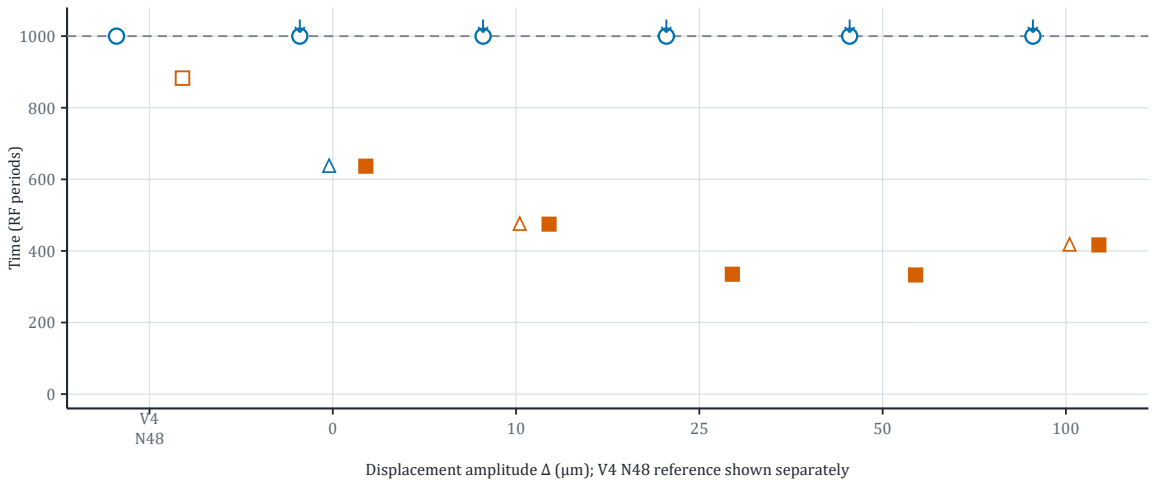
Finite-time retention and first passage versus radial displacement

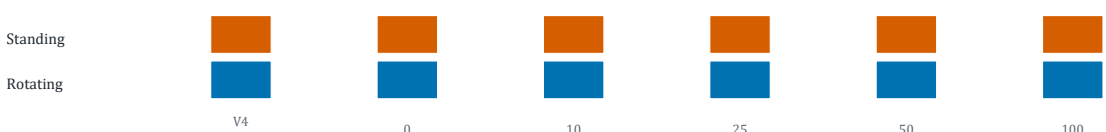
One V4 boundary launch · 0.75 eV · r_0 = 1 mm · θ = 67.5° · φRF = 270° · clockwise

○ Rotating: survived 1000 RF (censored) ■ Standing: first outward r = 8 mm crossing △ Tighter rerun

A First aperture crossing; survivors right-censored



B Matched outcome matrix



Blue = retained through 1000 RF; vermilion = escaped. n = 1 per cell; deterministic result, no population inference.
