# Central pseudopotential diagnostic: flatness, anisotropy, and higher-order structure

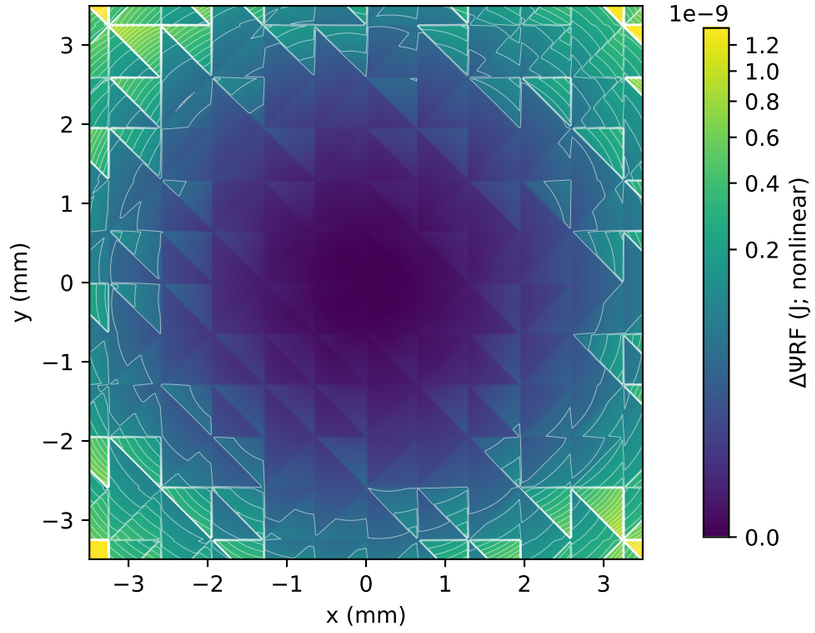

A  Full pseudopotential map

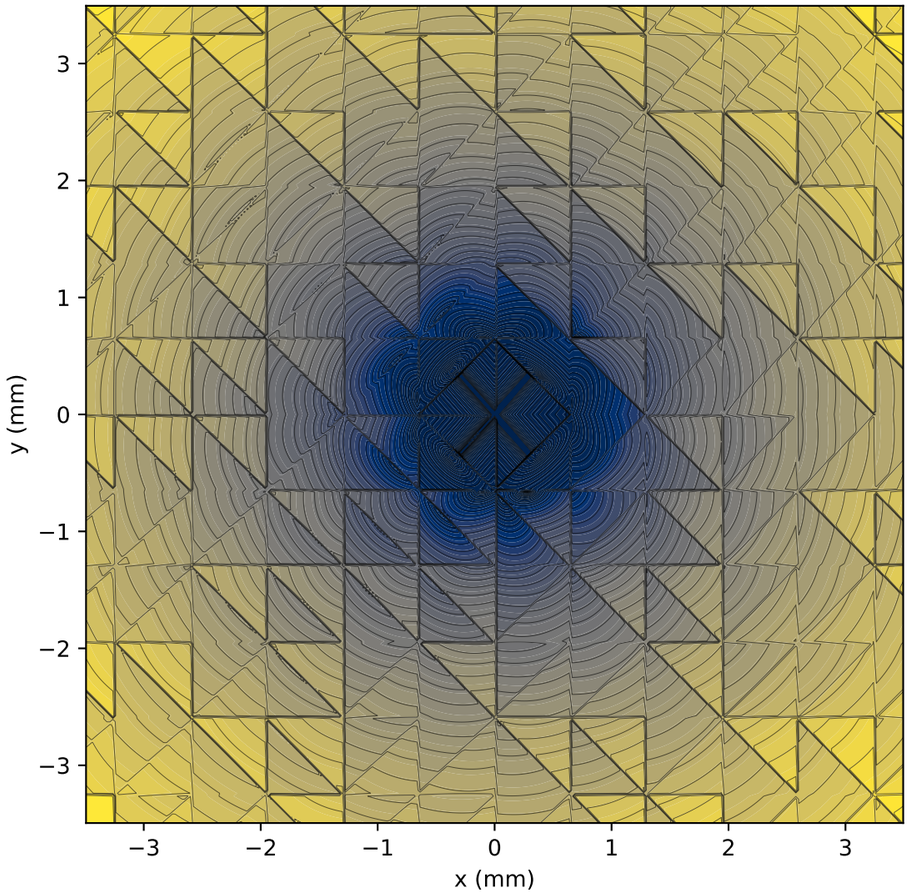

B  Central zoom (local ΨRF scale; Ψmin=9.822e-39 J)

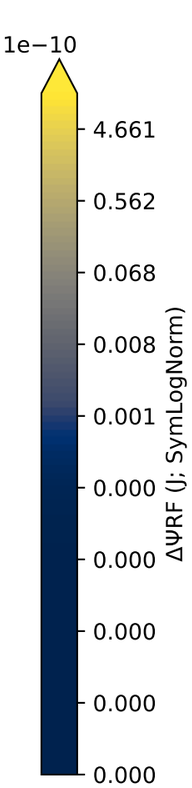

C  Contrast-enhanced ΔΨRF = ΨRF − Ψmin

D  Dense contour/topographic view (96 levels; local nonlinear contrast)

E  Radial cuts: angular anisotropy and higher multipoles
