Common-DC-bias comparison: RF potential, DC field, and exploratory dynamics

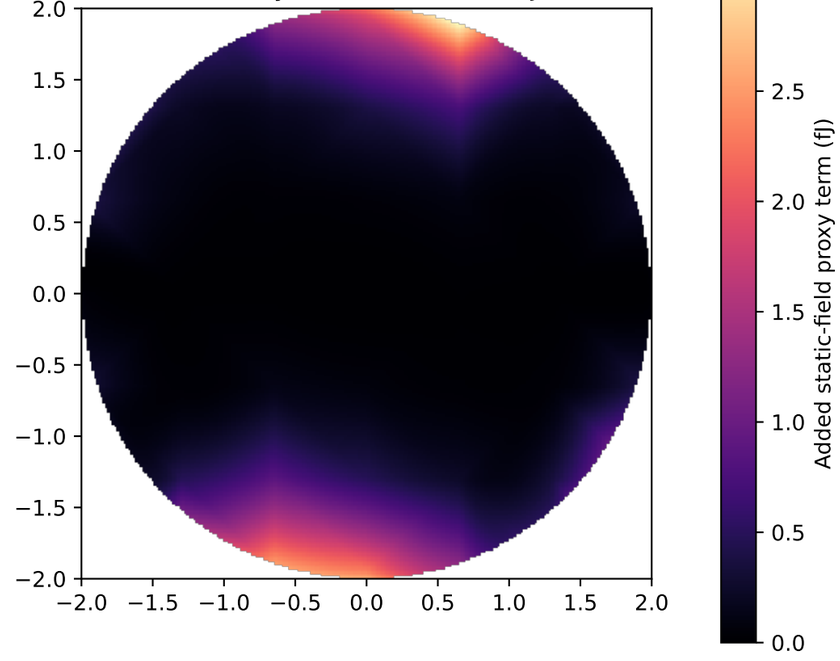

A Udc=0: RF pseudopotential ΨRF

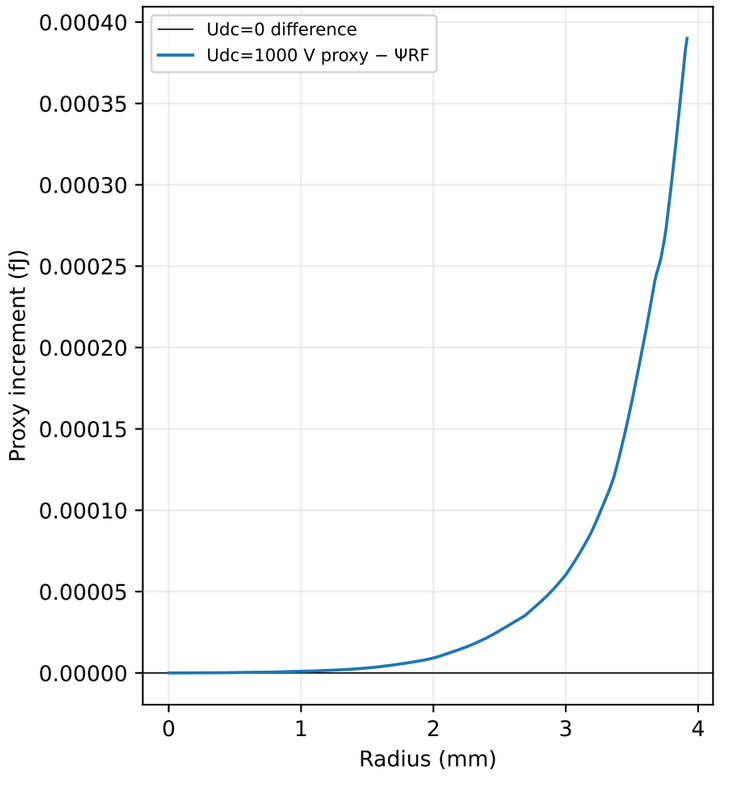

B Udc=1000 V: total-field proxy

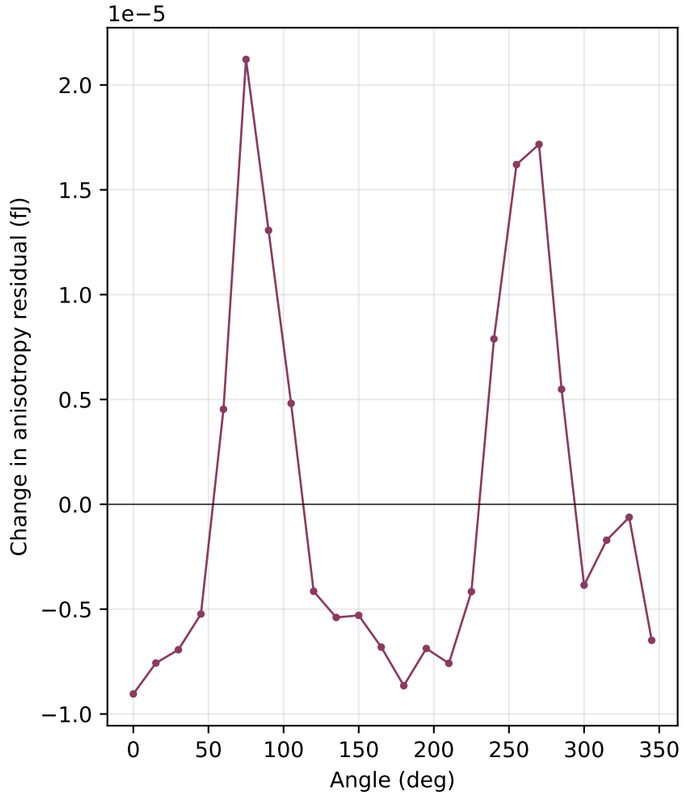

C Proxy − ΨRF, r≤2 mm (fJ)

D Radial differential (RF well itself is unchanged)

E Anisotropy change at r≈2 mm: 1000 V − 0 V

F Exploratory 40-period trajectory subset
