Matched launch: rotating retained, standing escaped

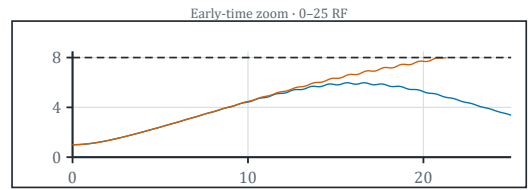

m/z = 100 kTh · E⊥ = 1 eV · r_0 = 1 mm · θ = 45° · φRF = 0° · + tangential · 250 V each

(a) x–y trajectory (mm)

(b) Radius versus RF period

Rotating · retained to 1000 RF

Standing · escaped at 21.31 RF

Dashed circle/line: 8-mm aperture. Saved traces use 8 samples per RF; the short panel expands the escape interval.
